

Transport economics

International seminar

Targeted audience

Heads of public or private transportation companies seeking to better comprehend the economic, financial, technical and social aspects of the transportation services sector.

Objectives

Knowing the implementation of transport planning tools and the knowledge of the evolution of the company management methods, so as to define a strategy in a national frame.

Developing one's awareness of economic approach of transport and logistics sectors, and economic evaluation criteria, in order to facilitate choices and decisions.

Implementing practical aspects of choices in the areas of regulation and infrastructure restructuring.
